

1. What makes a good language learner.

A good language learner possesses qualities that enhance their ability to master a new **curriculum**. One key quality is **motivation**. If a student decides to major in a language or treats it as a compulsory subject, they are more likely to succeed. For instance, if you see the **syllabus** not just as work but as engaging material (like films), the learning process becomes much more enjoyable.

Patience is essential. Learning a language often takes a full academic year or more, and progress is not instantaneous. If learners can remain patient when they struggle with a specific topic, they are less likely to drop out. For example, if you find grammar confusing, it's important not to let your mind keep wandering; instead, view it as a stepping stone to promote from one class to another.

Active participation in **seminars** and tutorials is crucial. If students regularly attend school and do not skip classes, they are more likely to thrive. Paying attention to the **tutor** and taking detailed notes allows learners to keep up with class discussions and topics more effectively.

Consistency in **practice** is vital for language proficiency. If you review your notes daily instead of waiting to **cram** right before an exam, you will notice improvements. Even a few minutes of daily revision is more effective than trying to learn everything at once just for a good mark.

Additionally, being open to **assessment** is important. Asking your instructor or academic advisor for feedback on progress allows you to learn from your mistakes. For instance, if you hand in a test and receive corrections, using that feedback helps ensure you won't fail in future assessments.

In conclusion, a combination of motivation, patience, and consistent attendance creates a successful learner. If you nurture these qualities, you are sure to excel in your exams and ultimately earn your degree. By engaging with the **educational institution** fully and making the most of your time in classes, seminars, and with your tutors, your chances for success in mastering a new language will be greatly increased.

2. What makes a good teacher.

1. A good teacher is someone **who** can **nurture** students within the **educational institution**. (Relative clause)
2. They *must* be patient, acting **as if** every student's success were their own priority. (Modal + as if)
3. If a teacher explains **compulsory subjects** poorly, students *might* get only **superficial knowledge**. (Conditional + Modal)
4. A teacher *should* use a **curriculum which** includes both **applied** and **theoretical courses**. (Relative clause)
5. They *can* encourage students to **attend school** regularly and not **play truant**.
6. If a student is **weak in** some subjects, a **tutor ought to** help them **keep up with the class**.
7. Teachers *should* make the **syllabus** interesting so students won't **wish to skip classes**. (Wish)
8. When students need to **sit an exam**, a good teacher *might* organize **tutorials** or **seminars**.
9. They *must* **assess** students fairly and ensure no one tries to **cheat** during the test.
10. If a student **flunks**, a teacher *should* motivate them not to **drop out** of school.
11. A good teacher *can* inspire students to **major in** subjects, helping them be **awarded a degree**.
12. Ultimately, they help students get good **grades**, treating them **as though** they are future colleagues.

3. Key factors in the second language learning.

Key factors in second language learning are vital within any modern **educational institution**. If students start in **nursery school**, they *might* absorb the language naturally, **as if** it were their mother tongue. A good **curriculum which** includes both **compulsory** and **optional subjects can** significantly accelerate progress. Students **who attend coeducational** schools *may* have different experiences compared to those in **single-sex** environments. If a student is **weak in** grammar, they *should* **pay attention** in class and ask the **faculty** for help. Learners **who wish** to succeed *ought to* **take notice of** the **syllabus** and never **skip classes**. Additional **training**, like **tutorials** and **seminars**, *can* help students **keep up with the class**. If they want to **pass exams** and get good **grades**, they *must* **revise** consistently rather than **cram** at the last minute. High achievers *may* even receive a **scholarship** or **grant** if they **do well** in their courses. The **grading system should** function **as though** it were a tool for motivation rather than just punishment. If students consult an **academic advisor**, they *can* decide whether to **major in** foreign languages. Ultimately, engaged students are less likely to **drop out** and *will* reach a higher level of fluency.

4. Aims of education.

The aims of **education** are vital for every student **who attends school** within an **educational institution**. Education *should nurture* children from **nursery school** and **kindergarten** up to **secondary** and **higher education**. Teachers *ought to* present the **curriculum as if** it were the foundation of life, covering both **Humanities** and **Natural Sciences**. Students often **wish** the **syllabus** included more **applied courses** alongside **theoretical courses** to gain practical skills. The program *must* include **compulsory subjects** and **optional subjects** so students find what they are **good at**. If **tuition** is **free of charge**, more people *will* have a chance to enter **college** or **university**. Good **training** and regular **assessment** help **promote students from one class to another**. If a student receives a **scholarship** or **grant**, they *might* be motivated to **do well** and not **drop out**. The **grading system** *should* be fair so that everyone **who** works hard can get good **grades** or a **degree**. Education *must* prepare students for **adult life**, **postgraduate** study, or **vocational** work. Ultimately, the goal is to be **awarded a degree** like a **BA** or **B.Sc.** and succeed. The final aim is ensuring people become **literate** and ready for **further education**.

5. The student of Na UKMA – What is he/she like?

1. A student **who** studies at Kyiv-Mohyla Academy is a unique figure in Ukrainian **higher education**. (Relative clause)
2. Whether a **freshman** or a **senior**, they engage with the **educational institution as if** it were their priority. (as if)
3. If they decide to **major in Humanities** or **Natural Sciences**, they *might* also sign up for **optional subjects**.
4. The **curriculum** is demanding, so students *must pay attention* to the **faculty to keep up with the class**.
5. If a student **skips classes** or **plays truant**, they *will* not get enough **credits to promote from one class to another**.
6. Diligent students often **wish** they could simply **revise** notes during the **academic year** instead of having to **cram**. (Wish)
7. Students *should* respect the **dean, professors**, and other members of the **department**.
8. The **grading system** is strict, so everyone *must* work hard to get high **grades** and a good **grade point average**.
9. If a student **does well in exams** and **seminars**, they *may* receive a **scholarship** or **grant**.
10. Every Mohyla student *ought to* follow the **honour system**, never daring to **cheat** or **plagiarize a thesis**.
11. If someone broke the rules, they *would* risk being **expelled** or **sent down from University**.
12. Ultimately, a **graduate who nurtures** honesty and discipline *will* be successful in modern society.

6. Private education. Is it fair?

Private education is a topic that many people discuss when talking about fairness in education. Private schools, which often charge high tuition fees, usually offer modern facilities, smaller classes, and special training. If education is not free of charge, many families cannot afford to send their children to private or boarding schools. Some students at private educational institutions may have access to optional subjects and extra tutorials that do not exist in state or public schools. If a student could attend a private school, they might get a scholarship for excellent studies, but most applicants must pay the tuition fee. Private education may help students keep up with the class and get high grades, but it is not always fair to those who cannot pay. If all schools offered the same curriculum and syllabus, every student would have a chance to get a good education. It is not fair if only a few students can enroll in preparatory schools because of family income. Education ought to nurture every child, whether they go to primary, secondary, or higher education. If private and public schools work together, they could promote equal opportunities for all. In my opinion, education should be free of charge and available to everyone, so nobody is left behind. If we want a fair society, we must make sure every student can attend school and graduate, no matter their background.

7. Alternative education. (The idea of Summerhill.

Alternative education, like the idea of Summerhill, is different from traditional **educational institutions**. Summerhill is a **boarding school** where students can choose which subjects to **attend, as if** they were free to create their own **curriculum**. The school's **syllabus** includes both **compulsory** and **optional subjects**, but students do not have to **attend school** if they do not **wish**. It seems **as though training** at Summerhill **nurtures** independence and self-discipline. If all schools were like Summerhill, children *might* feel more motivated and less stressed about **exams** and the **grading system**. I **wish** more **educational institutions** *could* offer **free of charge** education, so every child *could* experience this method. If a student wants to **major in Humanities** or **Natural Sciences**, they *may* **sign up for seminars** and **tutorials** that they like. At Summerhill, students are allowed to **go through** the **academic year** at their own pace, without being forced to **cram for** exams or **hand in** tests by strict deadlines. If you compare Summerhill to a **state** or **private school**, it looks **as though** students there are happier and more creative. I **wish** traditional schools had more **optional subjects** and less pressure from **compulsory assessment**. Summerhill students learn not only from the **faculty** but also from each other. If all schools **nurtured** creativity and freedom, more students *would graduate* with a love for learning.

8. Educating children at home: advantages and problems.

Educating children at home is becoming more popular, but it has both advantages and problems. If parents choose home education, they can create a curriculum that nurtures their child's interests, as if they were designing a private educational institution. Children may study Humanities, Natural Sciences, or vocational subjects which are not always offered at state schools. I wish every home-schooled child could attend tutorials or seminars with qualified faculty, so they would not have superficial knowledge. Some parents act as instructors, but they may not have enough training for every compulsory subject. If students do not have classmates, it sometimes seems as though they miss out on social life at school or campus. Home education can be free of charge, without tuition fees, but families must pay for books and materials. If the grading system at home is not objective, students might not get fair assessment. Some home-schooled students do well in exams and may win a scholarship or get a high grade point average. I wish more communities would offer evening courses or further education for children who study at home. If a child wants to major in a subject at university, they must meet entrance requirements like other applicants. Although home education can nurture independence, I wish every student could feel as if they really belong to the educational system. If parents and officials work together, home education might become a good option for many families.

9. Study problems.

Many students face study problems at every **educational institution**, whether it is a **state school**, **private school**, or **university**. If a student is **weak in some compulsory subjects**, they *may* struggle to **keep up with the class**. I **wish** every student *could* have an **academic advisor** or **tutor who** can help them with the **curriculum**. Sometimes, students do not **pay attention** in lectures, and it seems **as though** their **mind keeps wandering**. If students do not **put down notes** or **revise for exams**, they *might* **flunk** or **do badly in** tests. Some students try to **cram for exams** at the end of the **academic year**, but this often leads to **superficial knowledge**. If the **grading system** is too strict, students *may* feel **as if** they will never get good **grades** or a **scholarship**. I **wish** schools had more **tutorials** and **seminars** to help those **who** want to **major in** difficult subjects like **Natural Sciences**. If students **plagiarize** or **cheat**, they *could* be **expelled** from the **college** or **university**. Some students **miss** or **skip classes**, and as a result, they *may* **drop out** of school. If the **faculty** and **administrative staff** work together, they *might* **nurture** students and help them **promote from one class to another**. I **wish** every student *could* **go through** their **education** without so many problems, **as if** learning were easy for everyone.

10. Problems that students of your faculty might face adjusting to higher education.

Students of my faculty often face many problems when adjusting to **higher education**. The **curriculum** at **university** is much more difficult than at **secondary school**, especially for those **who major in** Applied Mathematics. If a **freshman** thinks they can rely on **superficial knowledge** from school, they *will* soon realize it is not enough. The **syllabus** for **compulsory subjects** like Mathematical Analysis is full of difficult theorems, limits, and integrals. I **wish** every student *could* **pay attention** to the **instructor** and **put down** good **notes** from the very beginning. If you do not **keep up with the class**, it seems **as though** you will fall behind quickly. When students become **sophomores**, they meet new **professors who** teach tough subjects like Probability Theory. The **training** in programming courses is also very demanding, and the **assessment** process *can* make students anxious. If you **hand in** your work late, or if it is not checked on time, you *may* worry about your **grades** or even **flunk** the course. I **wish** the **grading system** was less stressful and every student had more support from the **faculty** and **academic advisors**. If you **miss** or **skip classes**, it *will* be hard to **promote from one class to another** or to **graduate**. It sometimes feels **as if** the **academic year** never ends, but if you are disciplined and **attend school** regularly, you *will* make it through and be **awarded your degree**.

11. Aims of education at NaUKMA.

The aims of **education** at NaUKMA are very important and special. This **educational institution** wants to **nurture** well-rounded students **who** are not only **good at** their **major**, but also curious about other subjects. If a student chooses to **major in Natural Sciences** or Applied Mathematics, they *may* still **minor in Humanities**, **as if** they **wish** to avoid **superficial knowledge**. The **curriculum** at NaUKMA includes both **compulsory** and **optional subjects**, so students *can* broaden their minds. The **faculty** encourages every **freshman** to **attend school** regularly and **pay attention** in lectures. If students follow the **honour system**, they *must* not **cheat**, **plagiarize**, or break the rules during **assessment** or when they **hand in** a **thesis**. I **wish** every **university** had such a strong focus on academic integrity. If a student tries to **cram** before an **exam**, it is unlikely they *will* **promote from one class to another** or get good **grades**. The academy wants to teach students self-discipline and critical thinking, **as though** they were preparing them for **life-long learning**. If students respect the **dean**, **professors**, and all members of the **faculty**, they *will* **do well** in the **academic year**. The goal is to help students **graduate** with a **degree** like a **B.Sc.** or **MA** and be ready for **further education** or a **doctorate**. I **wish** more **educational institutions** *would* offer a **comprehensive curriculum** and **nurture** leadership. If you study at NaUKMA, you *will* feel **as if** you are part of a modern, honest, and

12. Why did you decide to get education at NaUKMA?

I decided to get my **education** at NaUKMA because it is a very special **educational institution**. I graduated from Kyiv-Mohyla Collegium, a **secondary school that** has a similar spirit to the Academy. If my teachers had not told me so much about NaUKMA, I *might* not have wanted to **apply** as an **applicant**. Even though studying at the Collegium does not give any privileges in the **entrance requirements**, it created a strong connection for me. It felt **as if** I was meant to **promote from** my **secondary school** to this **university**. I have always had a passion for **Natural Sciences**, so I wanted to **major in** Applied Mathematics. The **faculty** at NaUKMA is famous for its high standards and challenging **curriculum, which** includes both **compulsory** and **optional subjects**. I **wish** to avoid **superficial knowledge** and get real **training** in both **theoretical courses** and **applied courses**. The **campus** is beautiful, and I *can attend school* every **academic year** without any problems with the commute. The community at NaUKMA is very motivated, **as if** everyone is trying to **do well in exams** and never **play truant**. If I follow the **honour system** and respect the **dean, professors**, and other members of the **faculty**, I believe I *can* be **awarded a degree** such as a **B.Sc.** or **MA**. I **wish** every student *could* feel as proud and inspired as I do studying at NaUKMA.

13. Educational Attitudes in the USA

Educational attitudes in the USA show that people believe education is a key to success. From nursery school and kindergarten, children are taught that they must attend school and do well in their studies. Many parents hope that if their children study hard, they will be able to graduate and go to a good college or university. State schools are free of charge, but sometimes they do not have enough resources for every student. If a family can pay a high tuition fee, they may choose a private or independent school with a more comprehensive curriculum. It seems as though students at private educational institutions have more opportunities to take optional subjects and get better training. In the USA, standardized tests like the CAT and SAT play a big role in assessment and entrance requirements for higher education. During exams, students often fill out Scan-Tron sheets with number 2 pencils, as if the whole grading system depends on these multiple-choice tests. If a student does well in these exams, they can get a scholarship or be accepted at a famous university. I wish the grading system and standardized testing did not cause so much stress for students. Sometimes it looks as if the focus on multiple-choice tests gives only superficial knowledge and does not nurture creativity. Although the aim is to educate everyone, test results often show social inequalities. If schools could offer the same curriculum and support, more students would feel as if they have a fair chance to succeed.

****14. The Problem of Cheating: What Makes Students Cheat?****

The problem of **cheating** is very serious in every **educational institution**, from **secondary school** to **university**. Many students feel pressure to get good **grades** or a high **grade point average**, especially if they want to get a **scholarship** or **promote from one class to another**. If the **curriculum** includes too many **compulsory subjects** and not enough **optional subjects**, students *might* feel **as if** they have no choice but to **cheat**. Sometimes, students do not **pay attention** in class, and when their **mind keeps wandering**, they fall behind in the **syllabus**. I **wish** more students *would* **revise** their notes and prepare for **exams**, rather than trying to **cheat** or **plagiarize**. Some students try to **cram** for an **exam** at the end of the **academic year**, but they often realize their knowledge is only **superficial**. If the **assessment** or **grading system** is too strict, students *may* worry that they *will* **flunk** or be **expelled**. When students see peers **who** are **cheating** and not being punished by the **faculty**, it looks **as though** such behavior is allowed. If **professors** and **administrative staff** taught students about the **honour system**, fewer students *might* **cheat**. I **wish** every student *could* feel confident enough to **hand in** their own work and not be afraid of failure. **Cheating** does not help students to **learn by heart** or develop real skills. If everyone respected the rules, **educational institutions** *would* **nurture** honest and responsible **graduates**.

15. The Problem of Cheating: How to Combat Cheating?

To combat **cheating** in **educational institutions**, both students and **faculty** *must* work together. First of all, teachers *should* **nurture** a culture of honesty by explaining the **honour system** at the beginning of every **academic year**. If students understand that **cheating**, **plagiarizing**, or copying during an **exam** *might* lead to being **expelled**, they *may* think twice before breaking the rules. The **curriculum** *should* include interesting **compulsory** and **optional subjects**, so students feel motivated to learn and not just to **pass exams**. I **wish** all students *would* **pay attention** in class, **take notice of** the **syllabus**, and **put down notes** to prepare for tests. Regular **tutorials** and **seminars** *can* help those **who** are **weak in** some subjects to **keep up with the class**. If **assessment** is fair and the **grading system** is clear, students *will* feel **as if** they have a real chance to **do well** without **cheating**. **Faculty** and **administrative staff** *ought to* check every **thesis**, **quiz**, and test for **plagiarism**. If students see that teachers care about honest **training**, they *may* stop trying to **cheat**. I **wish** every **educational institution** *would* **promote** students for their real knowledge, not for tricks. If students felt less pressure to get high **grades** or a **scholarship**, they *might* not risk their future by **cheating**. In the end, to **award a degree** *should* mean to recognize true achievement, **as if** every **graduate** had **learned by heart** and worked hard.

WORK and EMPLOYMENT

1. What qualities are needed by people in the area of work connected with programming.

People who work in programming need many important qualities. Programmers must be good at problem-solving and logical thinking, as if every task is a puzzle to solve. Those who are weak in attention to detail may create mistakes in code that are difficult to find. It is important to be reliable and able to cope with challenging and demanding work, especially when it is necessary to keep to the deadline. Every applicant for a programming job should be self-confident and ready to learn new skills, since technology changes quickly. Programmers often need to work full time or even overtime, depending on the project. A good specialist should work well with colleagues and under the supervision of a manager to make a good impression at the job interview. This profession often requires both intellectual and creative work, which can be very rewarding. A flexible attitude toward work is useful, as work from home or on shifts is common in this field. Those who want to achieve success and get promotion ought to improve their qualifications and efficiency. Programmers must be able to handle stress, as though they were competing in a fast-moving field. It is wished that more people understood programming is not just about computers, but also about teamwork and personal gratification. Developing these qualities may lead to a great career and a good salary in programming.

2. What qualities are needed to become a successful programmer.

To become a successful programmer, one *must* possess specific qualities to navigate this **intellectual** and **creative work**. A good programmer *should* be **skilled** at problem-solving, acting **as if** every task were a mental puzzle. If you are **weak in** attention to detail, you *might* create mistakes in code that are difficult to find. This **profession** is often **challenging** and **demanding**, so one *must* **cope with** stress and **keep to the deadline**. **Reliability** and **efficiency** are valued by every **employer**, and **job satisfaction** often depends on finishing projects well. A successful **applicant** *should* be **self-confident** and ready to learn new **skills** for the **labour force**. It is **wished** that every **specialist** would feel a **sense of self-worth** and **personal gratification** from their work. **Flexibility** is helpful because programmers *may* have to **work from home** or adapt to changing **working hours**. Those **who** want to **achieve success** in their **career** *ought to* improve their **qualifications** and not **be idle**. If these qualities are developed, a programmer *can* get a **promotion**, a **pay rise**, and a **rewarding** job. Sometimes, it seems **as though** programming is only about computers, but teamwork and communication play a big role. Ultimately, working **full time** or **overtime** in this **highly-paid occupation** requires dedication.

3. Unemployment: state remedy for.

Unemployment is a serious problem **which** affects the entire **labour force** and the economy. The state *must* create **employment** opportunities by supporting new businesses and encouraging **employers** to hire. If the government invested in **apprenticeships**, unskilled workers *could* become **skilled specialists** with better prospects. I **wish** every **applicant** *could* find a job that matches their **qualifications** and offers **job satisfaction**. Sometimes, people are **made redundant** or **laid off**, so the government *ought to* provide an **allowance** to help them **survive**. It is important to assist applicants **who** need to submit a **curriculum vitae** or attend an **interview**. The state *should* offer advice on how to make a **good impression** to secure a position. If **flexible hours** or **work from home** options were available, more people *would* be able to **earn one's living**. **Unemployment** often makes people lose their **sense of self-worth**, **as if** they were not needed by society. The state *could* support those looking for a new **occupation** or wanting to improve their **transferable skills**. If the government reduced **excessive taxation**, **employers** *might* be able to **employ** more new workers. Ultimately, the best remedy is to help every person find **rewarding** and **efficient** work within the **work force**.

4. Would you like to start your own business? Explain why/why not?

I **wish** I could start my own business in the area of engineering and IT, especially something connected with BIM models. BIM, or Building Information Modeling, is a **creative** and modern way to **handle** engineering projects. If I had my own company, I *could* **employ skilled specialists** and create **efficient** solutions for construction and design. **Running a business** *would* be **challenging** and **demanding**, but it *might* also be very **rewarding**. I **wish** I had more experience in **managerial** work, as sometimes it seems **as though** being a **head** or **manager** requires special skills. Starting a business *could* help me achieve **job satisfaction** and give me a **sense of self-worth**. If the business is successful, I *might* be able to offer **full-time employment** to others and help reduce **unemployment**. Sometimes, working for an **employer** *can* be **repetitive** or **boring**, but running my own company *would* allow me to work on interesting projects. I *would* try to create a good working environment where **colleagues** *can* use their **intellectual** and **creative** skills to **meet the needs of** clients. If I **specialized in** BIM models, I *could* compete with companies **which** are already established in the engineering field. Of course, there are risks, and I *might* have to work **overtime**, but the **prospects of promotion** and **personal gratification** seem worth it. I **wish** more people with an interest in engineering *would* take the opportunity to **take risks** and benefit from new technology.

5. What profession would you like to have? What qualities are essential for it?

The **profession which** I would like to have is that of a software developer, an **occupation** that involves **intellectual** and **creative work**. It is important for a **specialist** in this field to be **good at** problem-solving and able to **cope with demanding** tasks. If a developer is **skilled** and **efficient**, the **employer will** value their work and *may* offer **promotion** or a **pay rise**. **Adaptability** is essential, as the tech world changes quickly and new **skills** are always needed. I **wish** all **employees could** work in teams where **colleagues** and **supervisors** support each other, acting **as if** everyone were working toward the same goal. Communication is also important because developers often work **under the supervision of** a **manager** or together with other specialists. If someone is **self-confident** and **reliable**, they *can* make a **good impression** at a **job interview** and during daily work. **Time management** matters because it is important to **keep to the deadline** and avoid **excessive overtime**. I **wish** every developer *could* benefit from **flexible hours** or the chance to **work from home**. If a person becomes a **workaholic**, the job *may* become **tiring** or **boring**, so balance is important for **job satisfaction**. Those **who** want to **achieve success must** not **shirk work** but *should* strive for **advancement in work**. In conclusion, this **profession** offers good **prospects of promotion**, a **high salary**, and **personal gratification** for those **who** develop the right qualities.

6. What factors influence people's attitude to work?

Many factors influence people's **attitude toward work**. One important factor is **salary**; if a job is **well-paid**, **employees** often feel more **job satisfaction**. Working conditions also matter—a **creative** and **rewarding occupation may** be more attractive than a **boring** or **repetitive** one. The attitude of the **employer** and **supervisor can** affect how an **employee** feels about the workplace. If **colleagues** are friendly and **reliable**, it seems **as though** going to work is a pleasure, not a duty. **Unemployment** or the fear of being **laid off may** make people feel insecure and affect their **sense of self-worth**. I **wish** every person *could* find a **profession** that matches their **skills** and brings **personal gratification**. Opportunities for **promotion** and **advancement in work** are also important, as they motivate **employees** to be **efficient** and improve their **qualifications**. **Flexible hours** or the chance to **work from home can** help people **cope with** family needs and reduce stress. If someone is **addicted to work** or forced to work **excessive overtime**, the job *may* become **tiring** and even unhealthy. Social background and education influence **career** choices, **as if** some **applicants who** have better degrees have more chances to succeed. I **wish** every **job application would** be judged fairly so everyone *could* **earn their living** and benefit from **rewarding** work.

7. What factors influence success at work?

Many factors influence **success** at work, **which** helps an **employee** achieve their **career** goals. First, a person *must* be **good at** their **profession** and have the necessary **qualifications** to **meet the needs of** the **employer**. If someone is **reliable** and **efficient**, they *will* make a **good impression** on their **supervisor** and **colleagues**. The ability to **cope with challenging** and **demanding** tasks is important, especially when working **overtime** or under pressure. I **wish** every **employee** *could* work in a **creative** and **rewarding** environment, **as if** every day brought new opportunities for **advancement in work**. **Promotion** and **prospects of promotion** often motivate people to work harder and improve their **skills**. **Job satisfaction** and a **sense of self-worth** *can* also help a worker **achieve success**. If a job offers a good **salary**, **bonuses**, or **fringe benefits**, employees *may* feel more valued and try to do their best. **Working hours** and **flexible hours** *can* influence success, as some people need to balance work and family life. If someone is **addicted to work**, **excessive overtime** *can* be **tiring** and unhealthy. Social background and support from **colleagues** *may* help a person **climb up the ladder** in their **career**. I **wish** every **applicant** *could* find a **well-paid** job that brings both **personal gratification** and the chance to **earn one's living** with pride.

8. What does success mean to you?

8. What does success mean to you?

Success means much more to me than just making a **fortune** or becoming famous. **Success** is about **job satisfaction** and having a **sense of self-worth** in my **occupation**. I **wish** every person *could* find a **profession** that is **creative** and **rewarding**, not **boring** or **repetitive**. If I am **good at** something and *can* use my **skills** in a **challenging** job, I *will* feel proud and motivated. To **achieve success**, it is important to be **efficient** and **reliable**, and to make a **good impression** on **colleagues** and **supervisors**. I want to be **well-paid** and receive benefits like a **bonus**, **perks**, or **social insurance**, acting **as though** my work were truly valued. If I have **flexible hours** or *can* **work from home**, it is easier to **keep to the deadline** and avoid **excessive overtime**. I *do not* want to become a **workaholic** or be **addicted to work**, because work-life balance matters to me. I **wish** I *could* have **prospects of promotion** and **advancement in work**, so that every year brought new opportunities. For me, success also means being able to **cope with** difficulties and not to **be idle** or afraid of new challenges. If I *can* **earn my living** comfortably and enjoy what I do, I *will* feel **personal gratification**. In conclusion, success is a mix of meaningful **employment**, steady growth in my **career**, and feeling respected as part of the **labour force** **which** supports society.

9. Working at home: advantages and disadvantages.

Working at home has both advantages and disadvantages for the modern **work force**. One advantage is that **employees** can have **flexible hours** and avoid the **tiring routine of work** involving a daily **commute**. If a person works from home, they *may* find it easier to **keep to the deadline** and balance work with **non-working activities**. Sometimes, working at home can be **creative** and **rewarding**, especially for those **who** are **good at intellectual work** or **freelance professions**. It *may* also help some people **cope with** family needs and reduce stress. If a job is **well-paid**, working at home *can* bring a good **sense of self-worth** and **job satisfaction**. However, there are also disadvantages; it is easy to become **idle** or to **shirk work** without a **supervisor** or **colleagues** nearby. Some people *may* feel **as though** they are not part of the **labour force** and miss the teamwork found in the workplace. If **working hours** are not managed, people *might* end up working **excessive overtime** and become **addicted to work**. Sometimes, **promotions** and **prospects of promotion** (or **advancement in work**) are limited for those **who** do not work **full time** at the office. I **wish** every **employer would** evaluate employees fairly, whether they work at home or on site. If people *can* develop good **skills** and stay **efficient**, **working at home** *may* be a very good option for many **occupations**.

10. If you could choose, would you work at home. Substantiate your choice.

If I *could* choose, I *would* prefer to **work from home** part of the week and spend the rest in the office. This way, I *could* enjoy both flexibility and the benefits of being part of the **work force**. **Working from home** allows me to focus on **intellectual** and **creative work** without the **tiring commute**. If I have **flexible hours**, I *can* manage my **working hours** better and **keep to the deadline** more **efficiently**. It seems **as though** I am more productive and less stressed when I *can* choose my **routine of work**. However, I **wish** to have some days in the office to collaborate with **colleagues** and feel part of the team. Being **under the supervision of** a **manager** or **head** helps me stay motivated and develop my **skills**. If I only worked at home, I *might* miss the team spirit and be less involved in discussions about **promotion** or **advancement in work**. A hybrid approach *would* also help me avoid becoming a **workaholic** or working **excessive overtime**. I **wish** every **employer would** allow **employees** to choose what works best for them. If I *can* balance work at home and in the office, I *will* feel a greater **sense of self-worth** and **job satisfaction**. In conclusion, a mix of remote and office work seems the most **rewarding** and **cost-effective** option in my **profession**.

11. What makes men infiltrate professions historically dominated by women?

Men often **infiltrate professions** historically dominated by women for many reasons. Sometimes these **occupations**, such as nursing or teaching, offer stable **employment** and good **prospects of promotion**. If **unemployment** is high in traditionally male fields, men *may apply for jobs* in other sectors to **survive** and **earn one's living**. Some men want a **rewarding** and **creative career**, even if it is not **manual** or **managerial** work. I **wish** everyone *could* choose a **profession** based on **skills** and interests, not just **social background** or old traditions. If a job is **well-paid** and brings **job satisfaction**, it does not matter whether it was once seen **as if** it were "women's work." Some **employers** value **efficiency** and **transferable skills** more than gender. It seems **as though** the modern **work force** needs both men and women to **meet the needs of** society. If men are **self-confident** and **reliable**, they *can* make a **good impression** during the **interview** and be **employed** as **trainees** or **specialists**. Sometimes men are attracted by **flexible hours** or the chance to **work from home**, especially if they want to balance family life. I **wish** more people understood that every **profession** *can* be **demanding**, **challenging**, and **rewarding** for anyone **who** tries. In the end, **job satisfaction** and **personal gratification** *should* be more important than stereotypes.

12. What makes women infiltrate professions historically dominated by men?

12. What makes women infiltrate professions historically dominated by men?

Women often **infiltrate professions** historically dominated by men for many reasons. Some want to **achieve success** in **challenging** and **rewarding careers**, such as engineering, technical work, or **managerial** positions. If **unemployment** is high in traditional women's jobs, women *may apply for a job* in other **occupations** to **earn one's living**. Many **employers** now value **skills**, **efficiency**, and **qualifications** more than gender. It seems **as though** more women are becoming **self-confident** and willing to **take risks** for better **job satisfaction** and higher pay. I **wish** every **applicant** *could* be judged by their abilities, not by **social background** or stereotypes. Sometimes women want to benefit from **flexible hours**, **work from home**, or **full-time employment** that is **well-paid**. If a woman is **good at** something, she *should* have the chance to get **promotion** and **climb up the ladder**. **Training** and **apprenticeships** help women get the necessary experience for these **professions**. If women are **reliable** and make a **good impression** during an **interview**, **employers** *may shortlist* them for **highly-paid** positions. I **wish** more **colleagues** and **supervisors** *would* support women **who** want to **specialize in** **demanding** fields. If more women enter these jobs, society *may* begin to see that any **profession** *can* be suitable for anyone, **as if** gender barriers didn't exist.

13. Work is a nature's physician and is essential for human happiness.

Work plays a vital role in our lives, acting **as if** it were a natural physician for our mental well-being. Engaging in meaningful **employment** enhances our **sense of self-worth**, whether the position is **highly-paid** or **low-paid**. Whether an individual holds a **managerial** or **manual** job, they are contributing to the **labour force**. If people find work that is **intellectual**, **creative**, and **challenging**, they *will* likely experience **personal gratification**. For instance, a **skilled specialist who** finds their job **rewarding** *will* be happy and motivated. Conversely, if the **routine of work** is **boring**, **repetitive**, and **tiring**, the **employee** *might* feel unfulfilled and wish to **shirk work**. Furthermore, work promotes social connections; when individuals work **under the supervision of a manager**, they build relationships with **colleagues**. If an employee is **reliable** and has a good relationship with their **supervisor**, they *will* enjoy their **working hours**. On the other hand, **excessive overtime** *can* lead to burnout if the **employer** makes the job too **demanding**. To combat this, **flexible hours** and the option to **work from home** are essential measures to help employees **cope with** stress. I **wish** every person *could* find a **profession** that brings **job satisfaction** and allows them to **earn one's living** with pride. Ultimately, if people avoid being **idle** and **achieve success**, society *will* be healthier and happier.

14. Work values in the USA.

Work values in the USA are shaped by the belief that hard work leads to **achieving success**. Many people **wish** to be **self-confident** and **reliable**, acting **as if** every **employee** *should* strive to be a **role model** in the workplace. Americans often value **challenging** and **demanding** work **which** brings **job satisfaction** and a **sense of self-worth**. If a job offers **prospects of promotion** and a **pay rise**, it is considered a good opportunity for **advancement in work**. **Employers** expect workers to be **efficient** and able to **cope with** difficult tasks, sometimes working **overtime** to **meet the needs of** the company. I **wish** every worker *could* enjoy **flexible hours** or **work from home**, which are becoming more common. **Job application** processes, including **interviews** and **references**, are taken seriously as **employers** want to **employ skilled specialists**. Many Americans believe that if they **keep to the deadline** and show initiative, they *will* **climb up the ladder**. If someone is **good at** their **profession** and makes a **good impression**, they *may* be **rewarded** with a **bonus** or **fringe benefits**. **Unemployment** is seen as something to avoid, so people **who** are motivated strive to **earn one's living** and maintain **employment**. It seems **as though** workers in the USA value independence, **efficiency**, and **personal gratification** from their **occupation**. In the end, work is not only about earning a **salary**, but also about building a successful **career** in the **labour force**.

15. Unemployment. What measures could be taken to reduce it.

Unemployment is a significant issue that affects the entire **labour force**. To reduce it, several effective measures must be taken to help those trying to **earn one's living**.

Firstly, government initiatives are crucial. If the government invests in infrastructure, it can create **manual** and **full-time employment** for those who are currently forced to **be idle**. Even if this work is **tiring** or **demanding**, it prevents people from having to **live on the dole** (or **welfare**) and helps them **survive**.

Secondly, education is key. If **educational institutions** focus on **apprenticeships**, a **trainee** can gain **skills under the supervision of a skilled specialist**. This allows them to acquire **transferable skills**. If an **applicant** is **versatile** and **good at** their **occupation**, they are more likely to find a **well-paid** job rather than a **temporary** or **low-paid** one.

Thirdly, encouraging people to **run a business** (or **handle** one) helps. If individuals are willing to **take risks** and become **employers**, they create jobs. Government support can teach them how to **handle managerial** tasks so they are not **put out of business** by a **competitor**.

Moreover, policies promoting **job mobility** are essential for workers who have been **made redundant**, **laid off**, or **sacked** (dismissed). If companies offer **flexible hours** or the ability to **work from home**, it helps individuals **cope with** personal demands while searching for a new **career**.

Finally, financial incentives matter. If the state provides an **allowance** or **payment** to **employers**, hiring becomes more **cost-effective**. This boosts **efficiency** and encourages companies to expand their **work force**.

In conclusion, reducing **unemployment** requires a multi-faceted approach. If we support **apprenticeships**, encourage people to **run a business**, and assist those who are **made redundant**, we can ensure **job satisfaction** and a higher **sense of self-worth** for everyone.

1. What is a computer? Describe the different ways that computers are used in daily life.

A **computer** is an electronic device **which** uses **hardware** and **software** to **perform operations** and process data. In daily life, people rely on **laptops**, **desktop PCs**, or even a **PDA**, behaving **as if** they could not function without connection. Most users *must* **access the Internet** to write emails, search for information, or communicate with friends. Students *might* use a **tablet PC** to **access databases**, **store information**, and **display data** on a high-resolution **monitor**. If someone needs to **carry out transactions**, they *can* use **input devices** like a **mouse** or **keyboard** to pay bills online. Inside the case, the **Central Processing Unit (CPU)** and **RAM** on the **motherboard** process **binary code** to execute instructions. Users often **wish** their **processor** had a higher **clock speed** (measured in **Gigahertz**) to handle complex tasks. **Peripherals** like **printers** (laser or inkjet) and **scanners** help people handle documents and produce high-quality **graphics**. If a person likes photography, they *may* use a **digital camera** with a **zoom lens** to take a clear **shot**. Entertainment is diverse, ranging from playing with a **game controller** to viewing media on a **flat panel** or **LCD** screen. People with disabilities *can* use adaptive devices like a **Braille printer** or **voice recognition system** to access technology effectively. It sometimes seems **as though** life *would* be much more difficult in the **digital age** without these machines. In conclusion, computers are essential tools **that** help people in work, study, and leisure every single day.

2. Your ideal computer system.

My ideal computer system *would* be a powerful **laptop which** is designed for **living in a digital age**. First of all, it *must* have a fast **processor**, such as a modern **Central Processing Unit (CPU)** with multiple cores and high **clock speed** measured in **gigahertz (GHz)**. If the **chip** (or **integrated circuit**) is strong, it *can* **perform operations** and run **software** smoothly. I **wish** the **laptop could** have at least 32 GB of **RAM (random access memory)** and **expandable memory**, so I *would* never worry about slowdowns when I **store information** or **access databases**. The **motherboard should** have free **expansion slots**, so I *could* upgrade **hardware** in the future. A good battery is essential, especially if I need to work without power for a long time. The **laptop should** include high-quality **peripherals**, such as a responsive **keyboard** with **alphanumeric keys**, **arrow keys**, and **function keys**. I *would* also want a precise **mouse** or **trackball** to **click**, **double-click**, and **drag** code blocks. If the **monitor** were a **flat panel Liquid Crystal Display (LCD)** with high **resolution** and great **colour depth**, it *would* **display data** and **graphics** clearly. A fast **storage** device is important to save and open files quickly, **as if** I never had to wait. The **BIOS (basic input/output system)** *should* be up to date for better compatibility with new **software**. I **wish** my ideal **laptop** had a **touch screen** or even a **voice recognition system** for hands-free work. In conclusion, this computer *would* help me **access the Internet**, **carry out transactions**, and work efficiently every day.

3. Input devices. Functions and features.

Input devices are **hardware which** allow people to enter data or commands into a **computer**. The most common **input device** is the **keyboard**, which has **alphanumeric keys**, **function keys**, and **dedicated keys** like **Shift** or **Ctrl** for typing text. A **mouse** lets users **click**, **double-click**, **drag**, and select objects, making it easier to **perform operations** in the **digital age**. If someone **wishes** for even more comfort, they *might* use an **ergonomic keyboard** or a **trackball**, which *can* reduce strain. Some people use a **graphics tablet** or a **light pen** to draw **graphics** or write directly onto the screen. A **scanner** *can* be used to **store information** from paper documents as digital files. **Digital cameras** are also **input devices** because they let users take **shots** and upload images, measured in **megapixels**, to a computer.

Microphones allow voice input, and with a **voice recognition system**, people *can* control **software** simply by speaking. **Touch screens** are popular on **tablets** and **laptops**, letting users interact with the device by tapping. If a user has limited mobility, an **adaptive switch** or **on-screen keyboard** *can* help them **access databases** and **carry out transactions**. I **wish** every **input device** *were* easy to use and connected quickly to the **ports** on the **motherboard**. In conclusion, **input devices** are essential for **living in a digital age**, as if computers *could* not function well without them.

4. How to choose a good printer?

Choosing a **printer** involves considering several factors **which** affect how efficiently you **perform operations**. First, decide on the type: an **inkjet**, **dot-matrix**, or **thermal transfer** printer might suffice for basics. However, if you need high-quality **graphics**, a **laser** or **multi-function printer** offers better **resolution**, **hue**, and **colour depth**. Architects **who** need to print large technical drawings *should* consider using **plotters** or **imagesetters**. Cost is crucial; one *must* check the price of **toner** or ink cartridges **as though** budgeting for a long-term investment. Connectivity matters; ensure the printer has the right **ports** to connect to your **laptop**, **desktop PC**, or **tablet PC**. Some users *might* need to **access the Internet** or **carry out transactions** directly from the device to print documents. Speed is often determined by the internal **processor** (or **chip**) and **clock speed** measured in **Gigahertz (GHz)**. **Ergonomics** are also important; a compact printer saves workspace and should support clear **scalable fonts**. A user with visual impairments *might wish* the device were compatible with a **Braille printer**. If you consider these factors, you *will* find a machine to **display data** and **store information** effectively. Ultimately, the right choice ensures you select **hardware** that fully meets your **software** needs.

5. Benefits and future of speech recognition systems.

Voice recognition systems transform how people interact with **hardware**, acting for users **who** might struggle with traditional methods. These systems allow users to **perform operations** simply by speaking into a **microphone**, bypassing **input devices** like the **keyboard** or **mouse**. This is crucial for **ergonomics**; a user with a disability *might* rely on this technology instead of an **adaptive switch** or **screen reader**. The **software** acts **as if** the computer were an intelligent assistant listening to commands. It allows them to **access the Internet**, **store information**, and **carry out transactions** without physical strain. Efficiency increases because dictating is faster than typing with **alphanumeric keys** or using **function keys**. Future systems *will* use advanced **Central Processing Units (CPUs)** and **integrated circuits** (or **chips**) to understand context better. Higher **clock speeds** in **Gigahertz (GHz)** *will* ensure instant processing of commands. They *might* even integrate with smart home **peripherals**, controlling **printers** or security systems via voice. If these systems become standard, they *could* redefine convenience for everyone **living in a digital age**. I **wish** every **laptop**, **desktop PC**, and **tablet PC** had this capability to ensure universal access. As technology evolves, speech recognition *will* become integral to our daily lives.

6. Choosing a camera. Functions and features.

Choosing a **digital camera** is a vital task for anyone **living in a digital age**. First, a camera **which** has high **megapixels** ensures that each **shot** is clear and detailed. If it features a **zoom lens**, it *can* take close-up pictures without losing quality or **resolution**. Features like **auto picture rotation** and **crop** make editing easy, **as if** the device were a mini computer. I **wish** cameras *could* **store information** directly on **disk drives** or connect to a **laptop** via **ports**. High-quality models **display data** on a **flat panel LCD monitor**, showing real **colour depth**. If the camera has a fast **processor** (or **chip**), it *will* **perform operations** quickly. **Touch screen** controls or **dedicated keys** help users **who** want to change settings easily. **Ergonomics** are also important; the device *should* feel comfortable to hold during long sessions. A good camera *must* have **expandable memory** so users *can* save photos without worry. If it comes with a **microphone**, it *can* also record sound or short videos. For accessibility, a camera with a **screen magnifier** or **visual alerts** *might* be useful. In conclusion, the best choice meets needs for **graphics** and **hardware**, ensuring every photo is a masterpiece.

7. How to choose the right display?

Choosing the right **display** is important for **living in the digital age**. First, consider the **resolution**, as a higher resolution *can display data* and **graphics** more clearly. If the **monitor** is a **flat panel Liquid Crystal Display (LCD)**, it *will* usually be lighter than a **Cathode Ray Tube (CRT)** display. I **wish** every display *could* show colours with great **colour depth** and **aspect ratio**, so images appear realistic. Some people *may* need a **touch screen** or an **Active-matrix LCD**, acting *as if* the monitor were a giant tablet. The **video adapter** (or **video graphics adapter**) *should* match the display to **perform operations** smoothly. If the **monitor** has a fast response time, watching videos becomes more enjoyable. **Ports** are important too; the display *must* connect easily to a **laptop**, **desktop PC**, or **tablet PC**. For those **who** work long hours, **ergonomics** and a **screen magnifier** *can* help reduce eye strain. I **wish** more displays came with **visual alerts** and **adaptive switches** for people with special needs. **Thin film transistor** technology *can* make screens brighter and more colourful. If the **monitor** has good **hardware** and **software** compatibility, it *will* work well with many devices. In conclusion, the right display *should* fit the user's needs for **graphics**, accessibility, and comfort.

8. An ergonomic university.

An **ergonomic** university is a place **where** technology and comfort help students learn better while **living in a digital age**. All computer labs *should* have adjustable chairs and desks, so students *can* use a **laptop**, **desktop PC**, or **tablet PC** without strain.

If the **monitors** are **flat panel Liquid Crystal Displays (LCDs)** with high **resolution**, it *will* be easier to **display data** and **graphics** clearly. I **wish** every classroom had good lighting, *as if* the environment were designed to prevent students from feeling tired. **Keyboards** *should* be **ergonomic**, potentially **expanded/ergonomic keyboards**, so everyone *can* type comfortably. For those **who** need special support, there *could* be **on-screen keyboards**, **Braille printers**, or **adaptive switches** and **screen readers**. If every student had access to a **touch screen** or a **voice recognition system**, it *would* be easier to **carry out transactions** and **access the Internet**. I **wish** all **peripherals**, like the **mouse** or **trackball**, were designed for comfort. The university *should* use **software** that supports **screen magnifiers** and **visual alerts** for students with vision problems. If the **hardware** is modern, with fast **Central Processing Units (CPUs)** and enough **RAM**, students *could* **perform operations** without delay. It seems *as though* an **ergonomic** university *would* help everyone work efficiently. In conclusion, building an **ergonomic** university means creating a space where technology supports every student.

9. Gadgets of the future.

Gadgets of the future *will* revolutionize how people **perform operations** while **living in a digital age**. New devices **which** have faster **Central Processing Units (CPUs)** and **chips** *will* process data instantly.

If every gadget *could* **access the Internet** and **access databases**, users *would* **carry out transactions** anywhere. I **wish** future **laptops** and **tablet PCs** had more **expandable memory** to **store information** securely. Traditional **peripherals** like **keyboards** and **mice** *might* be replaced by **touch screens** or **voice recognition systems**. It seems **as though** **monitors** will become thinner, using **Organic Light-Emitting Diodes** or **Active-matrix LCDs**. These screens *should* offer higher **resolution**, better **colour depth**, and clearer **graphics** to **display data**. Future **digital cameras** *will* feature higher **megapixels** and **auto picture rotation** for the perfect **shot**. If gadgets used wireless **ports**, they *could* connect easily without the need for cables. **Adaptive switches** and **on-screen keyboards** *may* help people with disabilities use **hardware** more easily. I **wish** every device had good **ergonomics**, acting **as if** it were custom-made for the user's comfort. In conclusion, future technology *must* be smart and efficient to support everyone's needs.

10. Is high technology a force for good or evil?

High technology is a powerful force **which** influences everyone **living in a digital age**. On the positive side, advanced **hardware** and **software** help people **perform operations** quickly. If someone needs to **access the Internet**, **access databases**, or **store information**, modern **laptops** and **tablet PCs** make it easy. Devices with a fast **Central Processing Unit (CPU)** and ample **RAM** allow users to **carry out transactions** and **display data** instantly. I **wish** every person *could* use **peripherals** like **voice recognition systems** or **screen readers** to overcome disabilities. However, technology *can* be used for evil, such as stealing data from **disk drives** or manipulating **binary code**. If hackers attack **storage devices**, personal files *might* be lost or stolen. It often seems **as though** some entities use technology to spy on **input devices** like **microphones** and **digital cameras**. Furthermore, spending too much time staring at a **monitor** or **LCD screen** *can* lead to social isolation. I **wish** all users *would* protect their **ports** and **systems** to ensure safety. If everyone used **ergonomic** and secure tools responsibly, technology *would* remain a force for good. In conclusion, whether high tech is good or evil depends on the user **who** controls the **keyboard** and **mouse**.

11. A device of your dream.

My dream device is a modern **tablet PC which** is perfect for **living in the digital age**. It *would* have a high-resolution **Active-matrix LCD flat panel** to **display data** and **graphics** with great **colour depth**. If the **aspect ratio** were wide enough, I *could* work with code and **access databases** simultaneously. The **hardware would** include a fast **Central Processing Unit (CPU)** and a **chip** with a high **clock speed** measured in **gigahertz (GHz)**. **Main memory**, especially **RAM**, *should* be large, and **expandable memory** through **expansion slots would** help **store information**. I **wish** the **motherboard** had many **ports** for **peripherals**, such as **disk drives**, **scanners**, and **printers**. For input, the device *would* have an **ergonomic keyboard** with **alphanumeric keys**, **function keys**, and **cursor control keys**. A **graphics tablet** and **light pen would** make it easy to draw or **grab** mathematical graphs directly on the screen. A **touch screen** and **voice recognition system would** let me **perform operations** or **carry out transactions** hands-free. If I had a sensitive **microphone**, I *could* code or give commands by voice. For output, the device *should* work with **laser printers** and **plotters** for text and graphics. I **wish** the **software** and **BIOS** were always up to date for smooth performance. In conclusion, this device *would* help me **access the Internet** efficiently, acting **as if** it were made just for my needs.

12. Main forces on today's IT market.

The main forces on today's IT market are driven by rapid changes in **hardware** and **software**. Companies compete to produce powerful **Central Processing Units (CPUs)** and **integrated circuits (or chips) which** have high **clock speeds** measured in **gigahertz (GHz)**. If a device *can* **perform operations** quickly using efficient **binary code**, people *will* want to buy it. **Main memory** (like **RAM**) and **expandable memory** on the **motherboard** are also important because users need to **store information** and **access databases** without delays. Consumers often **wish** that every **laptop**, **desktop PC**, or **tablet PC** had better **peripherals** and connectivity. **Touch screens**, **voice recognition systems**, and **ergonomic keyboards** are becoming standard **input devices**. It seems **as though** the market demands devices that *can* **access the Internet** and **display data** on high-resolution **flat panel monitors**. Cloud services allow people to **carry out transactions** online, reducing the need for large physical **disk drives**. If a company creates smart **software** that works well with **video adapters** and **graphics**, it *can* lead the market. Security is another force; users want to protect their **systems** from threats **as if** they were guarding physical valuables. I **wish** everyone *could* benefit from these advances, utilizing tools like **video projectors** or **scanners**. Designers are also focusing on **ergonomics**, creating **mouse** and **trackball** options that prevent strain. In conclusion, the IT market is driven by speed, convenience, and innovation, ensuring that technology meets the needs of everyone **living in a digital age**.

13. The role of a computer as an assistive technology.

A computer plays a very important role as assistive technology while **living in a digital age**. With special **hardware** and **software**, people **who** have disabilities *can* **perform operations** and **access the Internet** more easily. If a person cannot use a standard **keyboard** or **mouse**, they *may* use an **on-screen keyboard**, **touch screen**, or **adaptive switch**. I **wish** every **laptop** and **desktop PC** included **voice recognition systems**, so users *could* give commands by speaking. For those **who** cannot see well, a **screen reader** or **screen magnifier** *can* **display data** in a way that is easier to understand. **Braille printers** and **expanded/ergonomic keyboards** also help people with special needs. Computers with fast **processors** (or **chips**) and enough **RAM** *can* **store information** and **carry out transactions** quickly for everyone. If a **monitor** has a high **resolution** and good **colour depth**, it *can* show **graphics** and text more clearly. Special **peripherals**, like a **light pen**, **trackball**, **pneumatic switch (sip and puff)**, or **eyegaze system**, allow users to control the computer. **Visual alerts**, **textphones**, and **electronic notetakers** give extra support in daily life. I **wish** more devices had easy-to-use **ports** for connecting all these tools. It seems **as though** computers make it possible for everyone to work, acting **as if** disabilities were no barrier. In conclusion, computers as assistive technology help people live more independent and active lives.

14. What should be taken into consideration when buying a computer.

When buying a computer while **living in a digital age**, several factors **which** affect performance *should* be taken into consideration. (Relative clause + Modal). First, determine the purpose: an artist **who** creates **graphics** *will* need different **hardware** than someone **who** just wants to **access the Internet**. If the main task is **performing operations**, the computer *must* have a fast **Central Processing Unit (CPU)** with a high **clock speed** in **gigahertz (GHz)**. (Conditional). **Main memory**, specifically **RAM**, *should* be large enough to **store information** and run **software** smoothly. It acts **as if** it were the brain's workspace, so having **expansion slots** on the **motherboard** is useful. The **monitor** matters; a **flat panel Liquid Crystal Display (LCD)** with good **resolution** and **colour depth** *can* **display data** clearly. I **wish** every computer came with enough **ports** to connect **peripherals** like a **mouse**, **keyboard**, **printer**, or **scanner**. (Wish). Deciding between a **laptop**, **desktop PC**, or **tablet PC** depends on whether you need portability. Storage devices, like fast **disk drives**, are vital for saving files and **accessing databases** quickly. **Ergonomics** *should* be considered; an **expanded/ergonomic keyboard** and a comfortable **trackball** *can* prevent strain. If the device features a **touch screen** or **voice recognition system**, it *will* be easier for people to **carry out transactions**. In conclusion, choosing the right specs ensures the computer meets every user's needs effectively.

15. The role of a computer in the life of the disabled.

Computers play a vital role for individuals **who** have disabilities while **living in a digital age**. With specialized **hardware** and **software**, they *can* **perform operations** and **access the Internet** independently. If a person cannot use a standard **keyboard** or **mouse**, they *may* rely on an **on-screen keyboard**, **touch screen**, or **eyegaze system**. For those with visual impairments, a **screen reader** or **Braille printer** *can* **display data** in an accessible format. I **wish** every **monitor** came with a **screen magnifier** and **visual alerts** for users with weak eyesight. **Adaptive switches** and **voice recognition systems** allow users to control **peripherals** simply by speaking. Computers with fast **processors** (or **chips**) and ample **RAM** help **store information** and **access databases** quickly. If the device utilizes **ports** correctly, it is easy to connect tools like **scanners** or **expanded/ergonomic keyboards**. Even those with severe mobility issues *can* **carry out transactions** using a **pneumatic switch (sip and puff)**. It seems **as though** these technologies remove barriers, acting **as if** the disability did not exist. I **wish** every **laptop** or **desktop PC** were designed with perfect **ergonomics** to prevent strain. In conclusion, computers enable people to work and communicate via **textphones** or **electronic notetakers**, enhancing their lives.
